

# Polderbits 9.0 Serial Taringa

## 5. ケーブル表

GX7と機器間における、通常使用するケーブルダイアグラムを紹介します。  
 (本項で説明するケーブルダイアグラムは、“Mitsubishi Electric Corporation”の推奨事項とは異なる場合があります)

### 5.1 ケーブル表1

■ ケーブルの長さおよび9ピンD-SUB側を15ピンに変更する場合、次の内容を参照して下さい。

(1) GX7 COM 2側が9ピンの場合

GX7 COM2		ケーブル接続	ケーブル断面	
ピンの配列*注1)	ピンの配列		ケーブルの色	
<p>通信ケーブルコネクタ 前面基準, D-SUB 9 Pin male(オス, 凸)</p>	1		Red	<p>GX7422C ケーブル 25ピン側 ケーブル切断面</p>
	2		Yellow	
	3		Green	
	4		Blue	
	5		White	
	6		Black	
	7			
	8			
	9			

\*注1) ピンの配列は、ケーブル接続コネクタの接続面から見たものです。

(2) GX7 COM 2側が15ピンの場合 (10~15番ピンは、使用しないため表に省略)

GX7 COM2		ケーブル接続	ケーブル断面	
ピンの配列*注1)	ピンの配列		ケーブルの色

.haldav.net lichte peajure array masks About These haldav.net are all about the topics that interest you, such as family life, health, sports, technology, science, nutrition, movies, etc.. A combination of several web portals, the site was officially launched on 18 September 2003. Over the years, the site has been growing gradually, and now is one of the largest and most popular health portals in Flanders. Recent developments One of the most important recent developments has been the decision to make the site SEO-friendly, so that more people could find the site. The site uses the vbulletin software, which, as a result, has been greatly modified to work with the new system. External links haldav.net is currently using the following external links:In vivo and in vitro activity of cefepime against Gram-negative respiratory tract pathogens. The activity of cefepime, a new parenteral cephalosporin, was compared with that of other beta-lactams, by in vivo and in vitro testing against clinical isolates of Gram-

---

negative respiratory tract pathogens. Five hundred and seventy-four strains of Enterobacteriaceae were isolated from sputum, pharynx, and lower airways (trachea and bronchi) of patients with community-acquired pneumonia. These were tested by the disk-diffusion method. A collection of strains of *Pseudomonas aeruginosa* was also tested by the E-test method. The results were analysed using the chi 2 and the regression test. Ceftazidime was found to be the most active beta-lactam tested, with 100% of the Enterobacteriaceae susceptible to the drug. Cefepime, cefpirome and ceftazidime had, respectively, 91.8%, 88.8% and 86.4% of Enterobacteriaceae susceptible to the drug. The main difference between cefepime and cefpirome was in the *Pseudomonas aeruginosa* collection. Cefepime was more active than cefpirome in *Pseudomonas aeruginosa* (P 0.05). However, in vitro 82157476af
